Most digital cameras operate using an electronic image sensor, which is the photosensitive component in a digital camera that provides the ability to record light, such as light reflected from a subject. Conventional digital cameras capture still images by converting a fraction of the incident light that is incident on the photosensitive component of the image sensor into an electrical signal (analog or digital). The image sensor is typically a CCD (charge coupled device) or a CMOS (complementary metal-oxide-semiconductor) device. Most digital cameras also include a lens for projecting a subject on the image sensor. Typically, the lens is movable in the x, y and z direction relative to the image sensor. During the image capture operation, the lens
