AutoCAD Crack+ License Key Free Download [Win/Mac]

Using the Windows Desktop as a Display Unit You can connect AutoCAD to a PC via an external monitor or a projector, and use the PC display as a CAD display. You can't use an external display to use AutoCAD without some sort of hardware to drive it. If you don't have that hardware, you can use a USB graphics device that connects to the PC. If you have a PC monitor, you can connect your PC to the monitor. If you have a projector, you can connect it to your PC and then connect the monitor to the projector. You can also use the AutoCAD operating system itself as a display unit. It may be a low resolution monitor, but it does the job. If you have an external display connected to the PC, the PC should be in the right resolution, and you need to set the display unit (monitor or projector) to the same resolution. AutoCAD displays are usually much higher resolution than the resolution of the PC monitor or projector. If you don't have the hardware to connect a monitor, you can use a USB graphics device that connects to the PC. The USB graphics device has to be in the right resolution and need to be set to the same resolution as the PC. If you use the operating system's own display, you must set the operating system to the right resolution, or the operating system will appear much smaller than it should. Starting AutoCAD You don't have to download a program to the PC first to use AutoCAD; you can just use it directly from the AutoCAD application that's already on the PC. To get started, you must first select the File | Open menu and choose the AutoCAD program. The AutoCAD program is usually found in the user's Windows Start menu or the Quick Launch toolbar (in the bottom right of the window). The AutoCAD application icon is a square or rectangle, sometimes with rounded corners. It has a small black box in the middle that is usually either an arrow or a window with a half-shut eye. If you don't see the icon in the Windows Start menu, you can also find it in the Quick Launch toolbar, which appears when you right-click the Start menu. The Auto
