Photoshopped: I was photoshopped The term \_photoshopped\_ takes on a new meaning when you shop an image. The more images you shop, the more the "photoshopped" part of the term comes to describe that image. The image can look as if it has been altered or modified in some way, even though it has not. The reasons for doing this are several. For starters, the slightest change can be enough to totally revamp an image. When an image is photoshopped, it can highlight a difference that the original image is not strong enough to reveal. Even an expert photographer should be careful about using too many filters or Photoshop filters on a single image, as it can make it too complicated to determine what parts are original and what parts are not. The final reason for doing this is so the photographer is free to play with the image and really make it his or her own. If you want to view changes made to an image before you print it, make sure you save the image so that the image view remains constant. Also, make sure that you have a screen refresh rate that is at least 60 frames per second, which is the standard for most monitors and computer monitors. If the image is intended for print, then there is no need to have a screen refresh rate of 60 frames per second. If you're looking to sell your images as prints, you can make more money when you sell them as is and do not turn them into pieces of art. Even with your editing, sales of prints are likely to be less than half that when they're edited. This is because customers are not used to seeing images with this type of modification and may be put off if you make changes to an image that they perceive as a modification. Photoshopped: I've been photoshopped The term \_photoshopped\_ has a new meaning in photography. It takes on the meaning of "digitally altered." The term \_digitally altered\_ is applied to any sort of image, especially when it is altered so that the image looks different from its original state. The reasons for doing this are a number of things. For example, the slightest change can make an image look different. The reason that the change looks different is because of an alteration that was made to the image, such as adding a new layer, cloning or moving a layer, changing the layer opacity, or altering its color. Jannatabad-e Pīsal Jannatabad-e Pīsal (, also Romanized as Jannatābād-e Pīsal) is a village in Zilayi Rural District, Margan District, Boyer-Ahmad County, Kohgiluyeh and Boyer-Ahmad Province, Iran. At the 2006 census, its population was 124, in 24 families. References Category:Populated places in Boyer-Ahmad CountyHaplosporidians and Sporozoa. We present observations on the effects of various stressors on the reproducibility of sporozoite-like cells (SLC) detected in splenic smears from *Aedes aegypti* infected with *Plasmodium gallinaceum*, *Puccinia recondita*, or *Crenosoma striatum*. Strain-dependent decreases in SLC detection were observed, but generally only in the presence of added stresses. Increasing the duration of smear collection from the initial 100 to 300 s decreased SLC detectability in *Aedes*-infected mosquitoes but not in *Crenosoma*-infected mosquitoes. Shortening the time between splenectomy and smearing of the spleen also increased SLC detectability in *Aedes*-infected mosquitoes. Tuesday, August 24, 2009 The Perks of Being the Coolest Girl in the World (Under 30) When I moved to New York City in 1999, it was like the most exciting thing that ever happened to me. I was twenty-three and had a gap year ahead of me. It was a magical, magical time and I couldn't wait to get started. I applied to work in real estate, but the numbers were terrible. But, one of the partners at my favorite Upper East Side boutique, Frederick's of Hollywood, was dying to get someone to take over his wife's husband's job. He needed someone to take over the assistant manager role, and I was jumping at the chance to be a part of a thriving clothing store, but I wanted to work at a hip boutique. So, I said yes. You know what else? I was broke. Sometimes I would go to a restaurant and pay for one/two meals. Sometimes I wouldn't. But, it was fabulous. I was at a specialty store with expensive clothes. I could spend my money on those clothes instead of groceries. We don't have credit cards in Italy

Q: What should be done about numerical overflow when there is no solution of equations in the mathematical sense? Suppose that we have a system of linear equations  $Ax = b$ , where  $A$  is a square matrix with  $n$  rows and columns,  $x$  is a vector of  $n$  variables, and  $b$  is a vector of  $n$  scalars. Say that the system has a solution, so that there is a vector  $x$  satisfying  $Ax = b$ , even though it isn't unique. The question is whether it is appropriate to write a message such as "No solution exists" when the vectors  $x$  and  $b$  are less than  $\sqrt[n]{n}$  in magnitude. Specifically, should the message be something like "The system has no solution" when  $x$  and  $b$  are  $(1-\epsilon)$ -close (say) to zero in magnitude, or something like "The system does not have a solution," or something else? I'm curious to know what others think about this and whether there are any important practical ramifications. A: "No solution exists" is good. When you say that  $x$  and  $b$  are  $(1-\epsilon)$ -close to zero in magnitude, there will be infinitely many solutions. When you change the number  $1$  to  $0$ , you will not have infinitely many solutions anymore. Q: show facebook comments of specific post I need to show facebook comments on specific post. I use fb/comments.php as my template. I need to post text "Review this post" and show Facebook comments for this post. For example if this post has 1000 comments, i need to show 1000 comments for this post. How can i do that? A: I think you will have to write a custom script and query Facebook api in PHP to get the list of comments. Q: Probability density function in a continuous distribution Let  $X$  be a continuous distribution. (a) Let  $Y = \frac{2}{3}X$ . Find the pdf of  $Y$ . This was just to see if I got it right that for  $Z$  being continuous, you can just multiply the pdf by  $\frac{3}{2}$ .
