Consider this: static const double totalWeight = 150.0; I want to create a string containing the totalWeight as a variable: const string myString = $"the weight is {totalWeight}" However, this is not a correct syntax. Is there a way to get around this? A: You could define a helper function, though it might be better to just make the variable a float. float Foo() { float totalWeight = 150.0; return totalWeight; } const string myString = $"the weight is {Foo()}"; Randomized controlled trial of the effect of carvedilol on diastolic function in patients with chronic heart failure. The objective of this study was to evaluate the effect of carvedilol on diastolic function in patients with chronic heart failure. Carvedilol, a nonselective beta-blocker, has been shown to improve hemodynamics and survival in patients with chronic heart failure. However, the effect of carvedilol on diastolic function has not been well defined. Twenty-five patients (16 men and 9 women) with New York Heart Association class II to IV chronic heart failure and left ventricular ejection fraction of less than 0.35 were included in the study. All patients were randomized to receive carvedilol or placebo in a 2-month, single-blind, crossover study. Invasive hemodynamic measurements, including pulmonary capillary wedge pressure, mean pulmonary artery pressure, pulmonary capillary wedge-to-mean pulmonary artery pressure ratio, mean pulmonary artery pressure-to-left ventricular end-diastolic pressure ratio, pulmonary capillary wedge pressure-to-pulmonary capillary wedge pressure ratio, and left ventricular end-diastolic pressure were determined before and after each of 2 consecutive 4-week periods of carvedilol or placebo therapy. Diastolic function was assessed by measuring
