

“We wanted to get our hands on FIFA and have it totally reflect the reality of playing and scoring goals,” said Executive Producer David Rutter. “We wanted to create a complete match experience that captures the passion and excitement of playing the beautiful game.” “The quick increase in processing power and the leap forward in technology have made it possible to create a highly realistic experience,” added Rutter. “We are now able to take players’ real movements and apply them in a way that allows us to tell the story of a realistic football match.” “Our aim for FIFA is to capture the spirit of the sport,” said FIFA Creative Director and Senior Producer Aleksander Grunwalski. “With FIFA 22, we wanted to gather players’ abilities and enhance their movements to create an experience that players can feel immersed in.” FIFA 2K is on sale May 19. For more information on FIFA 2K, go to www.fifa.com/2k. About EA SPORTS EA SPORTS, a Division of Electronic Arts Inc. (NASDAQ: EA), is the world’s leading creator and publisher of interactive sports video games for the PlayStation®2 computer entertainment system, PlayStation®3 computer entertainment system, Xbox 360® video game and game console, and personal computers. EA SPORTS currently offers the most extensive lineup of sports video games with franchises including NCAA Football, Madden NFL, NCAA Football ’12, FIFA Soccer, NBA Live, NHL® ’11, and SimCity. EA SPORTS is a wholly owned subsidiary of Electronic Arts Inc., a leading global interactive entertainment software company. EA has studios in Redwood City, Calif., Melbourne, Australia and Austin, Texas, and offices worldwide. # # #The present invention relates generally to the design of integrated circuits, and more particularly to the design of circuit elements therein. Integrated circuits are commonly used for a wide variety of electronic applications, from simple devices such as the microprocessors of desktop computers, to the complex telephone central office systems. The integrated circuits may be designed to perform such functions as data processing, storage of program instructions, communication of the resulting data, and core support functions. As integrated circuits become more powerful, they are often designed to perform multiple tasks. For example, a microprocessor may be designed to perform not only its intended function, but

Features Key:

- Improved physics – Real-life player movements powered by the hugely popular “RUMBLE” engine – the physics and movement engine at the heart of the game.
- Enhanced ball physics and brand-new Player and Ball Behaviors – Every aspect of the ball – its weight, the way it moves, and how it behaves following a pitch invasion – has been injected with EA SPORTS™ physics engine innovation.
- New quick-fire Player and ball Interaction System – Look out for more authentic, intelligent and fluent on-the-ball interaction this season. For example, if a defender wins a set piece challenge, he can choose to take a shot at goal – and if he misses, his teammate can attempt a moment of magic. Or if a defended ball lands back out of the penalty area, defenders will scramble – decisions made in real time – leaving a slightly opened path for the nearest attacker.
- RUMBLE engine – The incredibly popular “RUMBLE” engine, which powered FIFA 15 and many of the series’ previous titles, remains at the heart of FIFA 22.
- Game Speed – Increased game speed has been added to drive the defensive systems, attack speed, momentum, awareness, and ball advancement.
- Playmaker Assist Mode – New in FIFA 22, playmaker assists remain a key attacking tool as more teammates can receive the animation cue directly from the player in possession to instantly swarm the ball and help build play.
- New Tactical Defending System – Tactical defending is back with an all new defending system in FIFA 22. Fervent defending can trigger new defensive reactions from AI-controlled teammates
- All-New Swiss System – A new Swiss System allows you to challenge big-name clubs with a brand-new algorithm. The improved system rewards meaningful results and complexity, offering more flexible options when planning attacks and defense as you try to play your way into the final four.
- New Terrain Engine – With more precise water handling and new clouds, environments, and movement, the stadium is now even more immersive, more realistic, more detailed and more responsive.
- Faster, bigger and more flexible community tournaments – Experience the fervor and features of the Google Play Games cloud with new community tournaments, all of which run at a more realistic pace.
