Edit: I feel dumb posting this, but I can't edit the question anymore. A: I think it is happening because you are deleting the post (by clicking on this link). It is being saved in the database table but the element (the question) is not being visible. You can fix the problem by clicking on Edit to make the post visible and then click on Delete to delete it from the database. cc: false # Support for the Guest VM # Export the guest's GO device to the kernel image CONF_DEFAULT_GUEST_GO_DEVICE="sda" # Export the guest's GPU device to the kernel image CONF_DEFAULT_GUEST_GO_DEVICE_GPU="sda" # Export the guest's GPU device to the initrd.img #CONF_DEFAULT_GUEST_INITRAM_GPU="sda" # If you want a guest that automatically initializes itself # after a system boot without the need of a bare root # installation on disk, set this to 'y' CONF_DEFAULT_GUEST_AUTO_BOOT="n" # Host the guest's initramfs in /boot/guest.img #CONF_DEFAULT_GUEST_INITRAM_IMG="/boot/guest.img" # # VFS configuration # Leave the root filesystem exposed as vfs CONF_DEFAULT_GQ_STRATEGY="outofcontext" # Leave the guest's root filesystem exposed as vfs #CONF_DEFAULT_GUEST_GQ_STRATEGY="outofcontext" # Force mounting some VFSs during the boot process CONF_DEFAULT_VFS_MOUNT="true" # Force unmounting of some VFSs #CONF_DEFAULT_VFS_UNMOUNT="true" # Enable "soft" mount (no error report, but no effect, if the system is # mounted cleanly anyway) of a VFS that doesn't support it yet. # For example, if the NFS version of the VFS doesn't support soft mounts yet, # enable the soft mount of the N
