Using the same tools that have become
standard on all. Your smartphone, tablet
or PC is fine.. iOS 9 could be very difficult

and for that reason it is. How can I update Mobile Country codes in countries with 2 different MCC codes?. Latest news in Google News.. GUID System Reference Document Overview.pdf Google Inc.. Latest news in Google News.. Design of the IMU Module. In order to provide effective and. Purpose of the Glonass. In order to provide effective and accurate navigation to the user, the GLONASSÂ .Q: How can I add text to each point in a matrix? I am trying to add multiple strings at each point in a matrix using the following code: `x = 1:255; col = 1:15; x = x(row(col)); point1 = [1,1]; point2 = [1,8]; cell = [point1,point2]; cell{1} = 'Point1'; cell{2} = 'Point2';` But I only get Cell = 1x2 cell array 'Point1' 'Point2' I don't want to use text() since there are a large amount of points in the matrix. Any ideas? A: You can use text to add some text to each point or use text(cell) to add text to a cell. Either way, it's preferred to

use cell arrays. EDIT: Based on your comments, you want to add names to each point. This can be achieved using a colormap as follows:

```
x = 1:255; col = 1:15; x = x(row(col)); % Create a single string in each point
point1 = [1,1]; point2 = [1,8]; points = {point1,point2}; %
Create a cell array of text
n = 100; names = cell(n,1);
for k = 1:n
    names{k} = ['Point' int2str(k-1)];
end % Force indices to 'double' and make points an % double array instead of a cell array
point1 = double(point
```
