Test II: Differential expression analysis {#Sec10} -- The differential expression analysis was carried out using R package DESeq (version 1.22.2) \[[@CR15]\]. Both DE and DEP were calculated for each cell type (BMAL1-activated and BMAL1-repressed) compared to their baseline WT control and DE was calculated separately for stimulated cells and for cells from the repressed condition. Genes were considered as differentially expressed if the corresponding *p*-value was \
