determine a date "soon." Still, that's a great idea for a fundraiser. And it's a perfect tribute to the 79th session of Congress, which is meeting again in just days. The most anticipated legislation this session is the tax plan, which Trump has said will be

released in the next 30 to 60 days. And with Trump and Republican leaders spending much of their time railing against the House's healthcare reform proposal, do you have any doubt that they could handle a good-tasting tax cut? The biggest point to remember is that

even if you don't like Trump, you should like tax reform. "Whether you like Trump or not, everybody should like the tax plan," said Roberton Williams, a senior fellow at the Tax Policy Center. Because it is a better idea, as I have argued before, to

while now, and it has come to a point where I am going to have to figure out what I can and can not change in my design. Recently I have been playing around with some guidelines I have developed from my experience, and the issues they caused. I have found that by

following certain basic principles, this allows me to take into account all the variables that have a direct impact on the design, without just introducing more issues and more problems. I have been using them as a base for a while, but never really thought of them as

"patterns". I know the name "pattern" might be misleading though, since they are not patterns per-se. I've created a wiki page with links to them, if you're interested in reading them: What I would like to know, is how others have dealt with the fact that the solution becomes

more complex as time goes on, and how they decided to resolve the challenges? A: I'm going to oversimplify what you're writing, I know, but just so you know... What is the up-front design of your project? What are your requirements of your project? What will
