AUDACITY AUDACITY Audio Editor, (also known as SoundEdit, AudioEdit, Audio Creator or Spectral Rewriter), is a freeware audio editor for Windows written by Mike Williams. Audacity Until about version 2.0 (1995), Audacity also contained a number of limitations on how it could be used. Newer Audacity versions have a freeware Pro version which Some restrictions on the free version have since been lifted, but the new limitations make it unsuitable for most people. A later version, Audacity 1.0, was produced by Marc Fridrich and Reimar Jupp, in 2003. This is Audacity's only version of which this review is specific. Audacity is a very capable editing tool for relatively small projects, though its limited scope means that it is best used on-line. Audacity can edit most audio files of digital audio formats, such as WAV, AIFF, OGG, MP3, WMA, and CDA files. It can also import Wave formats (including MP3, WAV, WMA and CDA) and almost any other popular file types from the "Save as...", "Save as...", "Export...", and "Import..." dialogs. Audacity is designed to be a low-level audio tool that doesn't try to do many things, but it does something well. The program can be used to edit levels, fade in and out sounds, cut and paste sounds, duplicate sounds and split multi-track audio into separate tracks, and many other tasks. More advanced users can use Audacity to create their own effects, with various plug-ins which are used together with the program's own controls. Audacity has been designed to be fairly easy to use. It's interface is user-friendly, and a keyboard-driven interface is fairly straightforward. The user is presented with a simple workspace, and a tree view of the audio files in a project, with the tracks in the audio editor part of the workspace becoming the channels in the file. Audio files can be previewed in the workspace. By default, the "silence" symbol is used for silence. Tracks can also be muted. A number of basic tools are available to cut, copy, paste and delete tracks. Once an edit is complete, the audio files can be imported into another software or a web page, ready
