For indispensable reporting on the coronavirus crisis, the election, and more, subscribe to the Mother Jones Daily newsletter. In 2007, Republican Presidential nominee and Alabama Governor and former Business Council head Bob Riley signed an executive order requiring state agencies to release certain documents by a certain date. From the state legislative website: This order should be read as a powerful means for an open and transparent government. It ensures that Alabama citizens have access to the records of the state government. In general, the order directs the heads of agencies to provide information to the public through regular and timely communication, with a focus on providing timely responses to requests for information. For agencies that do not respond to a request for public records timely or fail to respond at all, they may be subject to sanctions under the order. Not a single one of these requests has been followed up on. But in recent days, the state has finally been forced to respond to one: A request by The Birmingham News to Alabama Gov. Robert Bentley to disclose the number of times illegal immigrants have been detained at the state prisons came with a 56-page list of more than 100 questions, from how many families have been separated to how many have been deported. ….The governor's response to questions posed by The Birmingham News staff over four days Thursday through Sunday, released this morning, is the first documentation that Bentley was made aware of the 27 complaints made by Alabama prison inmates about being held in facilities housing "illegal aliens," and the number of employees who reported being harassed or intimidated because of their work. That's a lot of questions. Just what's being held back? How does the governor intend to enforce this order? With a 6-year-old son, this was never an idle curiosity for me. I expect to spend a few hours studying this answer very closely.Q: Ideas for a data structure/class representing a function I'm looking for some ideas for a data structure/class that would be simple to build but that could be generalized (e.g. could have more than two parameters, for instance) and would fit the following needs: Representation of a function. A function could be defined as a set of pairs of parameters and return values (of primitive type). For instance: bool g(int a, int b) { return a==0 && b==2; } or int sum(

Rheological and chemical properties of the exopolysaccharide of the red-pigmented Bacteroides thetaiotaomicron VPI-5482. VPI-5482 is a strain of the Gram-negative Bacteroides thetaiotaomicron isolated from human feces. It produces a flexible exopolysaccharide that has been shown to be attached to the cell wall of this bifidobacterial species and to be a likely component of B. thetaiotaomicron's matrix. Here we present results showing that the exopolysaccharide was a pseudoplastic fluid or gel at low shear rates. At high shear rates, the exopolysaccharide was fluid. The pseudoplastic response was consistent with a yield stress that was dependent on the strain and state of cell growth and occurred over a temperature range of 4-45 degrees C. These findings are similar to those reported for B. vulgatus and suggest that yield stress is a general property of many exopolysaccharides produced by Bacteroides spp. The yield stress in the VPI-5482 exopolysaccharide occurred at a relatively low concentration (0.5 g of exopolysaccharide/100 ml of culture) and corresponded to a viscosity of 5.3 cP. The concentration and viscosity of the exopolysaccharide were influenced by its state of growth and the strain of Bacteroides species that produced it. The exopolysaccharide of VPI-5482 is similar to the exopolysaccharide secreted by some Bacteroides species but is different from the exopolysaccharide of B. vulgatus, which is a very viscous, elastic fluid. The viscosity and concentration of this polysaccharide may influence the growth and metabolism of associated microflora.Q: how do we do cryptographic operations in windows phone 7 How do we encrypt and decrypt messages using Crypto API, whether its RSA or AES.
