The Jericho HTML Parser product has the ability to parse and translate HTML documents into an XPath-based XML representation, as well as to read and write XML. In its original form, Jericho HTML Parser will parse HTML documents. It is also possible to expand on this capability by adding XPath or XSLT engines for different languages. Jericho HTML Parser also contains an XML engine and an XPath engine. Jericho HTML Parser is a free tool for the HTML parser and XSLT engine developer who desires to write parser that conforms to DTD's and some W3C XML recommendations. Jericho HTML Parser is a very useful tool for developers needing to write parser for documents that have the ability to expand on the XML functionality. There are two modes of using this product. One is to use the library directly and the other is to use it through a web service. It is important that the developer uses this library because it simplifies the process of interacting with the library. This product is very similar to Apache XML Parser which covers the XSLT development of XML to HTML/XHTML conversion. The XML specification shows the basics for XML which covers their roots and the fundamental structure of XML. In addition to that, there are aspects of escaping characters and performing the various formatting and validation with respect to XML. Jericho HTML Parser covers some advanced usage of XML, which includes XPath-based languages and what needs to be done for XSLT. Jericho HTML Parser also covers XSLT and XSL as it includes the XML namespace. The XPath predicate language supports not only the various paths and attributes, but also the grouping of expressions and abbreviations. All of this is possible with Jericho HTML Parser. Jericho HTML Parser handles HTML and XML validation of complex HTML documents. Jericho HTML Parser includes the ability to work with XML documents from multiple sources. Jericho HTML Parser covers how to get from the input of HTML into an XML based system and vice versa. Jericho HTML Parser covers

document transformations, including inserting and removing elements, copying elements, and replacing text within an element. Jericho HTML Parser also covers HTML Table support, with great ability to parse tables, including the cells, attributes, and elements. Jericho HTML Parser includes the ability to include and use HTML DTD's as well as the ability to parse HTML pages which conform to a W3C standard or DTD's
