The present invention relates to an electromechanical device for the transverse regulation of the speed of a rotor, a stationary part being provided with a plurality of slots, in which a plurality of electromagnets are disposed, which electromagnets, in conjunction with springs of the electromechanical device, act on a plurality of control rollers which contact the stationary part, with at least one of the rollers being disposed on a ball, and with the balls of the control rollers forming a contact member of the electromechanical device. Devices of this type are generally known. In a known device, the electromagnets are mounted on a frame which is connected to a stationary part, for instance,
