Here is the original question: I am looking for a good (and cheap) USB caddy to use to connect a USB hard drive to my PC. Can you recommend a good caddy that will connect directly to a USB slot on a laptop, and not have any of the attached port's capabilities negated? A: I've been using an aftermarket MiniStor for years. Here's a copy of their page from the website: MiniStor 5GB USB 2.0 flash drive \$35.00 (MSRP) Micro drive for usb 2.0, 3.5" hard disk or mini adapter for micro drive, compatible with USB 2.0 port of most computers. Supports all the functions of the micro drive, with the added benefit of running on USB 2.0. As USB 1.0 doesn't have enough power for compatible hard drive, the MiniStor 5GB micro drive combines 3.5" standard hard drive with 2GB flash memory. It is the perfect portable way to backup important data and/or store files for the traveling computer user. They come in both 5GB and 2GB capacities. Many people don't even have an external USB port on their laptops, so the non-invasive MiniStor makes it easy to get back up and running at the airport. A: I'd try looking for a flash drive with a USB 3.0 connection, i.e. the smallest you can find. For example the SanDisk Sansa e200, which has a USB 2.0 connection, but that can be upgraded to USB 3.0. Another alternative is the Cruzer Edge which is the first one capable of using USB 3.0. A: I just ordered this for my wife. Fernandes family The Fernandes family is a family of Portuguese and Indian origin, with origins in India, who are known primarily for their extensive involvement in Portuguese India as merchants
