The 18th hole is the only one that you wouldn't want to lose the championship on. It's a 504-yard hole with a flagstick situated between a sand bunkers and overhanging trees, a water hazard in the left side of the fairway and a creek in the right. Plus, it is nicknamed "The Green Mile" for a reason. "I used to love to go out and practice on that hole, because I always thought it would be great to have those par 4s at the U.S. Open, where you could literally hit 50 balls on the same hole," said another golfer named Pete McClatchy, who competed at the U.S. Open 18 years ago. Click ahead to learn more about the 2012 U.S. Open. After the end of last season, the only golfer the Masters was missing was Mike Weir. The Canadian star had missed the last three majors, but he came back in style on the final day of the U.S. Open to shoot -3, then made birdie on the final hole to beat Brad Clinton and Russell Henley for his 15th career major. On Sunday, Weir will be playing in his first PGA Championship, which is a major in his own right. "I am going to be more than happy to see him there," he said. While the U.S. Open is known for its players having to contend with the wind, the course at Merion is designed to have only a little breezing. "You go out on any other course and it will probably be more windy than this one," said Weir. "There is not a lot of wind. It's interesting. There is a wind sock on every single fairway. Aligned with the British Racing Drivers' Club 'S&S' definition these are: Stock/Upgraded, Upgraded, Street. Which of these would you be happiest to drive? Rossetting is when a tuning package or better, engine modifications, is fitted to a stock engine producing enhanced performance. Upgraded Rossetting is when modifications are made to improve the performance of the stock engine to a level that is often quicker than what is expected of a tuned engine, but isn't tuned or modified to the extent of producing actual speeds that rivals factory performance. Street Rossetting is when the modifications are made to a vehicle to allow it to be usable as a daily driver. In most cases this will involve modifications to the suspension and drive line to allow more aggressive driving style, or include a different engine, transmissions or different ratios to suit the particular driving style.
