It works by importing the painting into SketchUp as a PDF, and then using the toolbox to segment the different features of the image into layers. Each layer is a separate 3D model, with a different color to identify them. A final camera is added in the scene in order to simulate the impression that Van Gogh painted from the exact viewpoint of his painting. A hi-res image of the Van Gogh painting and the complete SketchUp file can be downloaded. Made by Eric Gorfink and available on SketchUp Central under Creative Commons License.
