Could someone please explain what kind of input parameters I should use for a GET Request, because I cannot find any examples in the docs: Thanks! A: Mapbox uses the OGC gml based gpx specification to encode GeoTiff raster data, so your answer depends on what kind of data you want to put into your map. Options A. Image (TIFF, PNG, JPEG, etc) Options B. Text (already encoded in gml) Options C. Raster (image), example: Image(" token}") Options D. Raster (image) with a point to center over, example: Image(" token"&style=mapbox://styles/mapbox/streets-v9/v1/mapbox/{map-id}-{x}-{y}") Generally you need to save all your data as a as binary encoded tiff or in gml format to put it into a map. I can explain what gml is in the Mapbox Geonames documentation
