In the category of Electrical Engineering & PCB Technology > Hardware > Robotics. A single board computer (RISC micro-controllers micro-controller. I'll host a site where I'll be sharing my ideas and thoughts.. lspcad 5.25 pro 13 Summary The channel of tech support of an Android device is absolutely broken and Google doesn't have a single CRITICAL part for the decisions to cancel some of the devices, and do so immediately after releasing them. You spend a lot of money on a device, paying 700-1000\$ or more, or much more, to have a device suddenly get taken away from your side. Why should I have any trust in Google when it comes to the integrity of Android Devices? Why should any of us trust them? See also Why is Android's tech support so _____? Also See References Why is Android's tech support so _____? Official Google Technical Support Phone Number; Summary It can't be the original intention of Google or Google's employees to treat the users or the customers badly. They are very friendly, and the problem is that they don't have the capacity to deal with the sudden and massive influx of users to their products. A phone device is a basic basic device that has hardware and software components. Their hardware components are sold by them and people buy those products. Their software components are a web application, and the developers are paid by Google. If you bring up a bug in the web application, they are required to tell you what the bug is and why it affects the users. They answer their emails, which are very polite. If you have the problems with the phone device, the first thing they will tell you that is has problems with a certain software component. The problem
