Procedure open computer open the control panel find the HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon create a new key using the name cmdlg as password change the value of the new key from 0 to 1 close the registry editor Notes By default, the "Save" dialog box will not prompt the user for saving every time the user presses the Save button on the Windows control panel. If you are having trouble with this, set "Save always". Another option is to use "Do not save" to prevent Windows from saving any changes made to the desktop. Working through this tutorial is recommended if you haven't done any Windows scripting in the past. How to create the registry entries: First, search for the Windows registry in the Control panel. Now, look for the location that has the path name as HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon. Next, create a new key named cmdlg using the name as a password. Now, change the value of the key to 1. Don't remove the key. Close the registry editor if you are done. Syntax

Function Name	Description
RegCreateKey	Create a registry key in which you define the required data to be stored
RegWrite	Write to the registry
RegGetValue	Read the data stored in the specified key
RegQueryValue	Query the registry for the specified key
Return the value	(string data type)
GetValue	Set the data type of the returned value as the specified type (the format specified below)
RegSetValue	set the data type of the returned value as the specified type (the format specified below)
Return none	Constant to name the registry key, whose value you want to change
Name of the new registry key	Password used to create the key
The value	Value of the registry key to be updated
Type of the value to be updated	The format of the values
Value of the new registry key	Key name of the registry key
The values of the registry key to be deleted	The format of the values ' ' Set the data type
