Another raster-based program that can be free (at the time of this writing) or commercial. It has a different user interface than Photoshop. It lacks many built-in features, like the ability to create icons, object templates, and other graphic items from one click. Adobe provides online tutorials, both in the free GIMP software and in the GIMP software available for Macintosh OS X, that teach you how to use the powerful tools of the GIMP for creating and modifying images. You can go to the GIMP website and click the Help button or find them in any GIMP user's manual. Like Photoshop, the GIMP uses layers to help you keep track of the effects that you apply to an image. It also has many other powerful features that you can explore using online tutorials or by reading a GIMP user's manual. In Chapter 19, you discover how to create images with GIMP. ## Typical Image Editing Process In this chapter, you discover that it's easiest to approach image editing with a two-step process. The interface differs in the different versions of Photoshop and Elements. The first Photoshop feature I used was a simple pixel-editing photo retouching program. With that feature, I could manipulate the picture elements and add cool photos effects to my pictures. Before I used Photoshop for this, I had to take a photo to my PC and edit it on my own. The same goes for Photoshop Elements. The only big differences are that Photoshop Elements is not as easy to use as Photoshop. This is because Photoshop Elements has the same basic features but they are presented to the user in a different way. This means that a lot of Photoshop functions are missing in Photoshop Elements. However, if you are interested in the software to create your own images, you will need to use Photoshop Elements. This will save you lots of time. – Starting in mid-April, we began a pilot extension program at the San Francisco Ferry Building. We will be staying through the end of the year. Visit our program page for more details, including how to apply and what to do if you have a doctor's note. (more…) Yesterday afternoon, San Francisco sent powerful messages to D.C. and the rest of the world that the time for children is now. We won't be robbed of their childhood by powerful forces bent on taking everything from them. It was a historic occasion in San Francisco, one of the world's great cities, where hundreds of thousands of people marched together to say that enough is enough, and the time for children is now. Every child has a right to a childhood, and that's all the more important because modern America—through poverty, the school-to-prison pipeline, housing discrimination, and many other policies—has sharply limited that right. We marched together, families, friends, neighbors and strangers, and we were joined by delegates from all over the country, from Milwaukee to Oklahoma City to Seattle to Atlanta, as well as ambassadors from New Zealand and India. We marched through the most important and oldest parts of the city, passing through Grace Cathedral, on Castro Street, through Jackson Square, and then over Market Street to Civic Center Plaza, where we gathered outside to let the powers that be know that we will not stand idly by while children are robbed of their childhoods. My friend and comrade, the Rev. Dr. Lennox Yearwood Jr., gave a powerful and profoundly moving speech. He said: "We march together. We're together. There is power in this. There is power in unity. We will not be divided. We will not allow this to happen. Our children have rights, they must be granted those rights. Our communities have rights, those rights must be granted. Our people have rights. Those rights must be protected. Justice will come, and justice will prevail." Dependency Injection in.NET (Convention over Configuration) - octopus ====== spooneybarger The dependency injection implementation as described is really a singleton/per object configuration. Using the GoF which is what the author is alluding to will solve that issue. (see: [dependen...](component-in-go/)) The example code is pretty nice though. ~~~ octopus I'm not aware of a DI container built on top of GoF, but maybe I'm missing something. In my opinion Singletons are not very good design patterns and should be used only when there is no other way. I agree that Dependency Injection is a more correct approach. ~~~ spooneybarger Not sure why you would suggest it is not a good design pattern. I've been doing DI using interfaces heavily for a few years now. Even if you don't actually use interfaces as the primary way of doing it, it is possible to do so very cleanly. I'm certainly not advocating that you do. ~~~ octopus Do you prefer just using constructors? ~~~ spooneybarger I dont. ------ octopus I'm the author of this blog post. I would like to clarify that.NET 4.5 is still in beta and has not been released yet. Dependency Injection in.NET is still under heavy development. In fact it's still in alpha stage. If you want to stay up to date with the latest innovations in.NET 4.5 then you can subscribe to the mailing list, Twitter, GitHub or check out the documentation at . ------ invisible It does seem that DI containers and/or explicit registration/implementation are the current
