1. Open your PSD file in Photoshop. Remember that you can use almost any image format in Photoshop, including JPEG, TIFF, and PNG, but it's best to optimize your image before opening it. 2. To delete an existing file or load in a new one, press the Edit tab. Use the drop-down menu next to it to select the file format you want to load in (see Figure 1-4). Then, follow the prompts to load the image. Figure 1-4: Choose the image type you want to open. 3. Select the Tools panel and select a tool from the Edit option. To load a different tool, press the Tab key. Pick the tool you want to use, or press the tab key to cycle through the choices. With most tools, you can also right-click to open a shortcut menu where you can choose to perform a specific operation. In Figure 1-5, the marquee tool is selected. When you click and drag, a selection rectangle is drawn that you can manipulate. Figure 1-5: To load a new tool, press the Tab key or use the drop-down menu. 4. Photoshop offers loads of feature options. Beginners often don't know where to start when they open the entire Options dialog box. But fortunately, you can access many of the built-in tools simply by pressing the Tab key while your cursor is over a tool. Use the drop-down menu under the tool to choose the tool's options, or use the keyboard shortcut to access the Options dialog box. You can also

press Shift+Ctrl+A to bring up the Options dialog box at any time. Here are a few of the useful tools you can access with the Tab key: * **Arrange:** Select the specific layers you want in the Layers dialog box. Press Tab to toggle between the dialog boxes. * **Blur:** Select the amount of blur and the radius size of the box from which it starts to blur a selected object or area. * **Crop:** Use the Crop tool to remove any unwanted portions of your image and reshape it into a new composition. * **Direct Selection:** Use the Direct Selection tool to click and drag to select the area you want to adjust. A small box appears where your cursor is. Click once to select an area of the image. * **Dodge and Burn:** These

Q: Simulate keyboard keycodes on android native code Is there any way to simulate keyboard keycodes with native code in Android. I have native android app for windows. We need to simulate keyboard presses and detect if those keys are clicked. Keyboard code is a bit complicated for us. We need to simulate keys on computer. A: I was able to figure out this issue by calling getKeyDispatcher in OnKeyListener. public class KeyboardInputRecord implements OnKeyListener { private final int keyCode; private final String label; public KeyboardInputRecord(int keyCode, String label) { this.keyCode = keyCode; this.label = label; } @Override public boolean onKey(View v, int keyCode, KeyEvent event) { if(event.getAction() == KeyEvent.ACTION_DOWN){ int keyCodeForButton = event.getKeyCode(); Log.d("onKey "+label+" keyCode "+keyCodeForButton +" keyCodeForButton= "+v.getId()); v.performClick(); return true; } return false; } //getKeyDispatcher in native code private native int getKeyDispatcher(); public static KeyboardInputRecord getKeyDispatcher() { return (KeyboardInputRecord) nativeGetKeyDispatcher(); } } getKeyDispatcher returns keycode for button click. The expert ophthalmologist: is he still the cornerstone of modern clinical practice? The question about the role of the ophthalmologist has become increasingly debated in the last century. This is largely due to the fact that many medical innovations in the past century have increased the medical armamentarium for diseases of the eye. Despite all of the amazing advances of
