Synthesis of novel quinoline derivatives as anti-proliferative potential. Discovery of novel quinoline derivatives as anti-proliferative agents against HCT-116 cell line has been conducted in the present study. The target compounds were synthesized using recently reported method of two step protocol, giving good yields. The structures of the title compounds were confirmed using <sup>1</sup>H-NMR, <sup>13</sup>C-NMR, FT-IR and mass spectral techniques. The synthesized quinoline derivatives were screened for their growth inhibitory activities against HCT-116 cancer cell line. The tested compounds displayed promising activity as potential anti-proliferative agents. Compound 6j was found to possess higher IC<sub>50</sub> value (9.19µM) as compared to the standard drug, 5-Fluorouracil (5.95µM). The present work describes that the synthesized quinoline derivative can be a promising drug candidate for the treatment of cancer. In fact, BlackRock CEO Larry Fink hinted that the firm could pick a new clearing firm to replace SEC Clearing, a subsidiary it had with no Wall Street trading experience. "If I were to pick just one, I'd pick one that could provide a platform to trade U.S. stocks and that can provide liquidity, because liquidity is critical," Fink said in an interview with CNN's Poppy Harlow. "It takes liquidity to have an active stock exchange, and a successful stock exchange." The exchange has had this clearing provider called SEC Clearing since 2012, according to its most recent filing with the Securities and Exchange Commission.
