A few tips to keep in mind when using Photoshop: Use the standard keyboard shortcuts for actions and commands (Ctrl+A for example). Choose File → Save for web and Devices to save a new file, or choose File → Save to save an older file. When you're editing in Photoshop, use the Gimp. If you're working with a GIMP file that you created, you can open it in Photoshop or other image editors. If you're doing simple image editing on a GIMP file that's open in Photoshop, you can select Edit→Reset to return to the last state of your file. Use the Select tool to select an image area with the same or similar features as the area you want to edit. When selecting a photograph for editing, be sure to use good focus: a focused image is where you see sharp edges, color, and details. To apply a pattern to a new layer or layer group, choose Layer → New Layer with Pattern. For each new layer you create with the pattern you want to use, apply a layer mask to the layer so you can manage which parts of the layer show and which parts don't. Use Layer → Layer Mask to create a layer mask, or Layer → Create Layer Mask. You can change a mask's opacity to make it transparent or opaque. Layer masking is discussed later in this chapter. You don't want to confuse Photoshop's layer masking with the mask feature in the Canvas item options. Photoshop's masking is what you use to apply textures, patterns, and so on to your image layers. Use Layer → New Layer to

create new layers when you want to apply multiple items to your image. When working with an image that has been imported into Photoshop from other formats, for example, you might want to use layer-based editing tools to edit the image. When working with images that were originally imported from another format, however, you might want to use the features that are available in that other format to make your work easier. Don't try to save as a JPEG or Photoshop format in Photoshop. Only use JPEGs or Photoshop formats if you want to create web images, for example.

Objective ===== To investigate the outcome of neonatal seizures according to the types and duration of anticonvulsant therapy. Methods ===== A retrospective cohort study of 41 newborns who had clinical and EEG seizure. Neonatal seizures were classified into three subgroups according to treatment. The duration of the therapy was grouped into 3 categories according to the number of days between seizures: (1) Group I (≤ 3 days, $n = 13$). The subgroups were further categorized according to their responses to the first anticonvulsant therapy. Seizure free period (SF) (1) Complete cure: no recurrent seizures; (2) Partial cure: at least one seizure recurrence but without epileptiform discharges (EPDs) or electroclinical seizures; (3) Unmodified course: recurrence of seizures. Results ===== The median age of onset of seizures was 2 days (range: 1 to 17). The duration of treatment was 3 ± 0.5 days. The total duration of the anticonvulsant therapy was 10 ± 2.1 days. The patients were divided into three subgroups. The subgroup with complete cure had the shortest SF (1 day). SF of the subgroup that partially responded to therapy was longer than in the other groups (10.6 ± 1.2 vs. 9 ± 1.2 , $P = 0.5$). In the subgroup that showed unmodified course, SF of all cases was longer than other subgroups (20.3 ± 3.3 vs. 12.5 ± 1.1 , $P = 0.02$). There was no significant difference between the subgroup that showed complete cure and subgroup that partially responded to therapy ($P = 0.5$). There was no significant difference in sex between subgroups ($P = 0.4$). Conclusion ===== In newborns, there are three subgroups, (1) complete cure, (2) partial cure and (3)

unmodified course. In these subgroups, the duration of SF was longer in the cases with unmodified course. The subgroup with complete cure had shortest SF, which may be due to the treatment discontinuation. TORONTO (July
