Photoshop still functions as a vector program, so it may not always be the right tool for editing figures that have to be rasterized. For that purpose, you may want to examine newer versions of Photoshop such as the current version: Adobe Photoshop CC. It is specifically designed for manipulating vector artwork, including 3D vector artwork.

Photoshop CS5 is designed for the Windows platform, and Photoshop CS6 is still Windows only. You can, however, have Photoshop running on a Mac OS X system, and vice versa, with some degree of overlap of file formats. This chapter shows you how to

use Photoshop CS6 to edit text, color, and shapes. Don't forget to have the Brushes palette open to use the nifty graphics you create! Creating Photos Photos are one of the many tasks that you can do in Photoshop, including the following: Photographs: Adjust, edit, and create different kinds of photographs. Vector graphics: Change the

appearance of photographs in a vector (non-raster) file. Create new shapes, edit existing shapes, and add effects to your photographs. Raster images: Create different

kinds of raster images, such as photographs, from scratch or by modifying raster images. Videos: Create and edit videos, including video capture and editing. Graphic

designs: Create different kinds of designs, including Web and print designs.

Photoshop's interface is designed to aid the most common tasks. To get to the tools you need, you must first locate them on the menus, palettes, and panels. You can also go back to the tools by navigating to the bottom of the workspace via the Use drop-

down menu, shown in Figure 11-1. Photo (Figure 11-1): The Photo icon shows the current document. **Figure 11-1:** Use this menu to navigate to the menu items you want to use. Tool Box: Photoshop's most essential tool is the Tool box, and it organizes tools you access via the menus and panels. The tools are organized into groups, and the most useful tools appear in the upper-left corner

40 Most Popular Photoshop Plugins You Should Have In Your Toolbox Whether you are a designer, photographer, web designer or a graphic designer, you are likely using Photoshop for photo editing, designing websites and making memes. You're probably using Photoshop to correct and retouch your pictures, colour correct, add shadows, highlights, and shadows, white/black balance, correct lens distortions and more! Many of these Photoshop plugins can help you make your editing tasks faster, easier, and

more accurate. Make sure you have these 40 popular Photoshop plugins in your toolbox so you can start customizing your photos and designs on the next day of the job! There are dozens of plugins available for Photoshop and most of them are free. I share plugins that I use on a regular basis and use them in my web design and

photography clients. There are plugins for everything from logo design to scrapbooking and anything in between. All of the plugins have documentation to help you learn how to use them or setup your own tutorial. Each plugin has their own blog, or review of the plugin. Most have FAQs and tutorials but this isn't always the case. No matter what type of photo editing or website design, I'm sure there is a plugin for that. My top list is all about the cutting edge Photoshop plugins that are the most useful for web designers and photographers. There are many great plugins out there, but they are hard to keep up with since the plugins are often updated within a few months. I try to update my blog post with new plugins that I come across or ones that catch my attention. I try to go through my collection of the plugins, read the reviews, or the support forums to keep my top list updated for your best Photoshop plugins. Find all of the Photoshop plugins listed below. Check the Product Page for more information on how to use the plugin. If you own or use a different plugin, add it to the comments below! On Friday, the United States Patent and Trademark Office published a new video depicting prototypes of Apple's next flagship smartphones. The device features a glass front with an all-new display, introduced on the iPhone X, iPhone XS, and iPhone XR. The three iPhones also feature Apple's latest Face ID sensor, which enables new ways of unlocking the device. The iPhone Xs and Xs Max are pictured, while the iPhone XR is not pictured. The patent for this design also notes that Apple could be introducing the same design for the iPhone 8. (Source: USPTO via MacRumors) The video reveals that Apple may be releasing two new devices this year: the iPhone 8, and a new model featuring the iPhone X design, which will likely be called the iPhone XS Max. This is a new or new-ish design and the iPhone 8 will probably have glass on the front in the same way the iPhone X does. The new model will likely be larger than the iPhone 7 or iPhone 7s Plus, and features a display that could be near-bezel-less (though the new designs could feature the same notch as seen on the iPhone X). The video teases the arrival of the new iPhones with a logo that suggests the 6-month anniversary release of the iPhone XS on Sept. 19, 2018. The iPhone 8 could be a "side profile" design, meaning a flagship iPhone could have a liquid metal back to eliminate antennae, but still be slightly larger than the 5.5-inch iPhone X. The presence of a microphone cutout on the lower-right side of the iPhone X indicates this design. Apple's new iPhone design is reportedly similar to the design seen on Motorola's upcoming device, the Moto Z3. The Moto Z3 has a front bezel that's 90 percent covered by a glass front panel. Apple's past announcements have indicated that the new iPhone will feature wireless charging, and the device will have facial recognition features to let users unlock it without needing to use a passcode. Apple has a new operating system for the devices, which it calls iOS 11. It was first introduced in June, and revealed during WWDC in June alongside other new features. The company has described the new operating system as "the biggest update [to iOS] in years" and has promised that it brings "new camera features, iPad multitasking, a new Apple Pay Rewards Program,

Episode notes Even though they haven't been in custody for 16 months, the Toronto 16 have been busy at work. They've been consulting, we've been listening to their thoughts, and we've finally created a podcast exclusively about the criminalization of law student protest. This month, we're talking to David Hildebrand, the Toronto 18 trial lawyer who we've written about in the past. This particular podcast comes complete with an insight on the trial by the CBC's Frank Halliday. In his opening statement, the Crown detailed how the Toronto 18 conspired to cause and do harm. His rhetoric was pretty tough. "It's a betrayal of the greatest magnitude," was how he described it. "To conspire to cause and do harm is a betrayal against society..." "So what we're going to see at trial are three basic facts," said Hildebrand. "We're going to see that, one, their evidence is going to be incredibly weak. That's because we know that they're not heroes. We know that they're not the only peaceful people in the world. We know that there are people who are racist, there are people who are homophobic, there are people who are misogynist, and we know they have a better culture than those people and their culture is not peaceful, and to have that many people acting together in a way that does not cause and does not do good is to be an outrage."
