The tool works with a variety of files, including Adobe Portable Document Format (PDF) files. It also allows users to work with multiple layers and transparent objects, as well as providing multiple tools for selecting and manipulating objects in an image. Macintosh The Macintosh is the first computer to use Photoshop and its distinctive triangular Apple icon has been used by many subsequent versions. Photoshop was developed by the Apple Advanced Technology Group and first shipped with Photoshop for the Macintosh in 1987. With Photoshop 2.5, Photoshop broke a trend common with high-end software. The Apple Mouse was added as the second input device and Photoshop was the first program to use the Macintosh's advanced 3D mouse feature, an automatic true elliptical mouse action even on the Mac II. Photoshop also introduced a wide array of features, including layers and the font tool. These features were added in the subsequent versions as well, but increased usage of the software led to a desire to improve on them in subsequent versions. Adobe's first foray into the personal computer software market was in 1989 with the release of Photoshop 3.0. This release followed the trend for integrated products, which included the incorporation of the Macintosh display driver on the Macintosh, the Macintosh Applet, Mac OS 3.1, and the addition of support for 16-bit color depth. Adobe's initial release was lauded by users, and it quickly became the standard for digital imaging. After its success, Adobe concentrated its efforts on an intensive release schedule, and the major releases of Photoshop shifted from release every 6 months to release annually. Despite its price, efficiency, and the sheer number of available tutorials, there are still users who never convert their images to the PSD format. Adobe continued to improve Photoshop with every release. By the time Photoshop 4 came out, it was already considered so integral to the Macintosh that it was included in every Macintosh shipped. Adobe introduced several major changes with Photoshop 4 that helped shape the direction of the company. It introduced multi-sampling, a technique that drastically increased the speed at which layers could be multiplied and changed. It also added the first layer adjustment tools in the form of Hue, Saturation, and Lightness sliders, and later in the same release, the Brush tool and gradient options. It also added support for the.wmv multimedia format as well as support for Photoshop File Formats (PSF). Adobe added the Image Sequence function to Photoshop in Photoshop 4.

[Use of iodized salt and iodine supplements in early pregnancy for the reduction of maternal goiter and the prevention of pregnancy hypertension in Macedonia]. Use of iodized salt and iodine supplements for the prevention of maternal goiter and the reduction of pregnancy hypertension in early pregnancy was evaluated in a prospective clinical trial carried out in nine maternity hospitals of Vardar, Macedonia. Goiter was diagnosed as the presence of a thyroid gland larger than 50 mm in diameter. Women with goiter were classified into the following groups: group 1--women without goiter treated with iodized salt; group 2--women with goiter and treated with iodized salt; group 3--women without goiter and treated with iodized salt; group 4--women with goiter and treated with iodine supplements. A total of 2,224 pregnant women (18 to 39 years of age) were examined. Group 1 consisted of 1,482 (72%) women. In groups 2, 3 and 4 there were 600 (29%), 158 (7%) and 42 (2%) women, respectively. Goiter was diagnosed in 8% of the first group, 14% of the second, 4% of the third and 8% of the fourth group. There were no statistically significant differences among the four groups of pregnant women with respect to age, occupation, educational level and weight index. Goiter was significantly more frequent in the women of the first three groups with respect to the fourth group (9.6% in the first group, compared with 2.4% in the third group). The number of women with pregnancy hypertension increased significantly in the first group (4.7%) compared with the second (0.4%), third (0.2%) and fourth (0.5%) groups. Use of iodized salt and iodine supplements for the prevention of maternal goiter and the reduction of pregnancy hypertension in early pregnancy is highly significant. Thanks, Tana, for your help in getting this resolved. Q: If $f, g \in \mathbb{R}[X]$ then $\exists r \in \mathbb{R}$ such that $g(X) = rf(X)$ I was wondering if the following proof is correct: Let $f, g \in \mathbb{R}[X]$. Then $\exists r \in \mathbb{R}$ such that $g(X) = rf(X)$. Suppose that for all $r \in \mathbb{R}$, there exists $s \in \mathbb{R}$ such that $g(X) = s(f(X))$. The previous statement is equivalent to $\forall r \in \mathbb{R} \forall s \in \mathbb{R}$ then $g(X) = s(f(X))$. Thus it would be a simple matter to show, for all $r \in \mathbb{R} \forall s \in \mathbb{R}$, that $g(X) = s(f(X))$. Is this a reasonable approach? A: Your proof is fine. You can even argue it like that: $\exists r \in \mathbb{R} : r \cdot g(x) = f(x)$ for all $x \in \mathbb{R}$. This is because $r \cdot g(x) = f(x)$ for all x implies $\forall x \in \mathbb{R} : r \cdot g(x) = f(x)$. You can even go further and show that this implies $r \cdot g = f$. A: Yeah, the last line you provided is fine and is essentially the same proof. An alternative way to see it is that if the r does not exist, then r is a common factor of g and f , so g and f are in the same ideal and are therefore equal.
