Direct installer  
Win OS: 6.5.1

- 8.Q: What's the difference between running a model like below and one that returns predictions on the test set? I'm training a model on a dataset using tensorflow. I would like to use the model to return predictions on the test set, however I'm not sure how to return these predictions.

```
import tensorflow as tf
import numpy as np
```

# I would like

---

to use the model to return a prediction for each row of this file:

```
train_dataset_tf =
tf.io.load_csv('train_dataset.csv') test_dataset_tf =
tf.io.load_csv('test_dataset.csv') # A toy example. It
returns a single value for every row. This value is
greater than some threshold # I've set to show the
results of the model. def my_prediction_fn(image):
with tf.name_scope('feature_image'): image_tensor
= tf.image.convert_image_dtype(image, tf.float32)
return image_tensor train_dataset =
tf.constant(train_dataset_tf) # Float32 encoded
model_ = tf.saved_model.builder.SavedModelBuild
er('./saved_model_softmax') # Passing the input
placeholder to the signature function _ = train
1cdb36666d
```

on amputees, the remarkable May Shultz, for about an hour, was anything but boring. May is a true survivor, a former nurse, physical therapist and now a consultant working with other amputees who need prostheses, orthotics and other aids. May is certainly no quitter. “Let me help,” she said when we met just after she had finished serving up a lunch of stir-fried turnips and then led us through her home office to her computer. “Did you learn to type in high school?” The question was a bit of a guess that she intended to ask. She wasn’t there to sign up for AOL. This is a video of May’s presentation at the tail end of a session at the 32nd Annual Conference of the International Society of the Amputation and Prosthetics (ISAP) in Vancouver last month. May gave the presentation immediately after a panel discussion featuring all of the designers of prosthetic feet, a fascinating and lively group, each of whom offered a different perspective on the challenges that the industry faces. May took her computer to the small kitchen

---

table where she eats when she's by herself at night. "I can't get into that document," she said. Then she reached over the table with her prosthetic leg, grabbed the mouse, which was just beyond her reach, and deftly maneuvered it onto the table.

Within a few seconds, with a bit of experimentation, the keyboard was nestled in her lap. Most of the time when she answers her own phone, she simply takes the call. Not today. "Could you send me that document?" she asked. Somehow I didn't think that anyone would be able to figure out how to send it to her in an email or through the Internet, so I got my iPad with Google search up and conducted the necessary search for May — or, more accurately, May's email address — and sent her the document. She was able to open it just fine — and then proceeded to take a very
