UH JUNK But if I turn the battery on, I can get it to start up just fine, but once it's done, it doesn't boot, just shuts itself down. I have a feeling this is a motherboard issue, but I can't really check it up because the motherboard I bought would cost over 150 Euros. Does anyone know anything about this? 1 day ago 2019-01-28 SyFy BASIC So the problem is that the screen seems to go black, and I can't get the machine to boot, the USB worked perfectly on my other system, and the motherboard has a serial number on it. I plugged it in to my second system as well, and no luck there, either. 1 day ago 2019-01-23 Laila1 is there a high chance that the system isn't going to work on my account even if its battery is working??? my battery is also swollen 1 day ago 2019-01-09 Corky The motherboard seems to have a problem, the computer froze while running a GPU benchmark, which is not entirely surprising because the GPU I'm using probably wont work on this motherboard. The computer wont be compatible with my game of choice even if I replace the GPU. 1 day ago 2019-01-09 Ralphine It's weird, I replaced my GPU, it runs the same as the one I just replaced, but it's saying it needs a different GPU and neither of them are compatible with the motherboard. 1 day ago 2019-01-01 Miaa what happens when I plug in the the usb connector to the motherboard? please help 1 day ago 2018-12-29 Njoe Can someone tell me what this game is? I
