The player's cursor will flash red when the timer is running, and when it is over or if the player is touching the track. These events will also play their designated sounds. Players can use the arrow keys to scroll through the track and the F1 key to restart the countdown at the last checkpoint. The track will start its countdown at the easy level 15 checkpoints, but only if all fifteen checkpoints in that chunk have been activated. Devil's Canyon, Midway and some other level maps have a split track that consists of one track for the easy segment and one track for the hard segment. The tracking of the hard segment usually starts later than the easy segment's track, but it cannot start playing earlier. Players with the premium upgrade can skip the last level of a split track by paying 20 fruits. Fruit Ninja HD contains a set of achievements in the form of trophies. There are ten of each in the game. Players can get trophies by playing a level, either by completing the level without losing a life or killing the character. (Previously, the 20 fruits could be spent to avoid one life for the first level and two lives for all the levels.) The trophies are divided into three categories: Extra (for the achievements with level-related bonuses), Bronze and Silver. Players can redeem the achievements to receive special gifts: trophies with bronze and silver awards are unlocked for only a short while and may be worth relatively more, while the extra trophies can be claimed after a future patch releases. Thank you for trying the release of the newest public release of the Doors CS shell, Fruit Ninja HD. While it is impossible to test all code changes, here is a list of issues that were fixed. If you find more, please report them so that I can fix them quickly:
