the latest version of virtualdj has been released and it has had a few minor changes. this is a minor update, and is mainly aimed at fixing the bug in the previous version where the update check would fail if the virtualdj software was already installed. ibm smartcloud now offers the ability to virtualize and manage physical servers, using the powervm and smartcloud manager (scm) suite of products. it works by assigning each physical server a logical partition and then

---

assigning virtual machines to those logical partitions. 3. ibm is a leader in virtualization technology, and the company needs to advance its application programming interfaces (apis) for virtualization to allow third-party isvs to make use of this capability, just like it has done with the powervm for ibm i. 4. ibm also wants to make virtualization available to customers who want the new capabilities. the virtual machines for i and power are called virtual serial numbers (vsns). they are not partitions, and they are not virtual instances. they are just numbers. numbers that have no relation to any hardware. ibm's move to virtualization has been well-received. the company recently announced that it has been doing more

---

than 90 million of them a year, and the company has been expanding its portfolio of virtualization capabilities, including with the new i and power vsns. the company has made the virtualization functionality available to customers under the brand name smartcloud. with this announcement, ibm has now made the virtualization functionality available to isvs under the brand name smartcloud managed service. 5ec8ef588b
